Emergency readiness equipment overview

Our team prepares itemised equipment proposals for institutions and families in Nigeria and across Africa. We can specify devices and compatible accessories, delivery costs, familiarisation and available servicing.

Defibrillators for public facilities and homes

Markets, schools, sports complexes, offices and transport hubs can request automated external defibrillators (AEDs), cabinets and training units. Families considering an AED for their home can ask about suitable models, spare pads and batteries.

Read the defibrillator proposal

Beds, oxygen equipment and protective masks

We can quote for adjustable ward beds, patient monitors, oxygen concentrators, cylinders with regulators, oxygen masks and bag-valve masks. Families can enquire about beds suitable for home use. Protective equipment includes surgical face masks and FFP2 or N95 respirators of the kind used during COVID-19.

Read the beds, oxygen and protective masks proposal

Medical supply drone equipment

For institutions serving areas where road access is limited or disrupted, we can specify cargo drones, insulated carriers, temperature loggers, batteries and chargers.
