ABBA Lifesaving Technologies

EQUIPMENT PROPOSAL

Hospital beds, oxygen and protective masks

Our team prepares quotations for hospitals, other institutions and families arranging equipment for a private home. We can help you compare the cost of a bed, oxygen equipment or protective masks, including the accessories and support each item requires.

Adjustable hospital and ward beds

We can compare manually adjustable and electrically powered models for a hospital ward or family home. Tell us the available floor space, mattress requirements and delivery access so we can quote for a suitable bed, accessories and assembly where requested.

Medical oxygen equipment

The equipment list can include oxygen concentrators, oxygen cylinders with compatible regulators and flowmeters, tubing and oxygen masks. For a quotation, specify the models and connectors already in use and the quantities required. Bag-valve masks and pulse oximeters can be listed separately.

Protective face masks

Medical or surgical face masks and filtering facepiece respirators, such as FFP2 and N95 models, are types of protective equipment used during the COVID-19 pandemic. For an enquiry, specify the mask type, required standard, sizes and pack quantities.

Request an equipment quotation

Send the items and quantities you need, your country, delivery location and preferred delivery date. Our quotation can set out warranty terms and available servicing. Tell us if you need installation, device familiarisation or replacement consumables.
